

OM AQUA

AQUA FILL is an intelligent water level controller specially designed for RO water purifiers installed in water coolers. Built with advanced Magnet Sensor Technology, it ensures fully automatic operation of the RO system by monitoring the cooler tank's water level in real time. The system maintains optimal water availability while protecting critical RO components, resulting in higher efficiency, reduced maintenance, and longer equipment life.

With AQUA FILL, your water cooler tank remains consistently full, delivering uninterrupted cold water supply without manual intervention.

1 Year Warranty

- Fully Automatic Operation
- Always Full Water Tank
- Protects RO Components
- Extended Equipment Life
- Advanced Magnet Sensor Technology
- Shock-Proof & Rust-Free Sensors

MAGNET SENSOR TECHNOLOGY

AQUA FILL employs state-of-the-art magnetic level sensors that operate without direct electrical contact with water. This advanced technology offers superior accuracy, safety, and durability compared to traditional electrode-based controllers.

Applications

- RO Water Purifiers installed in Water Coolers
- Offices & Corporate Buildings
- Schools, Colleges & Universities
- Hospitals & Clinics
- Commercial & Industrial Premises
